

Selection of Test Scenarios

Selection:

- 1- Verify that each graph on dashboard should get updated when survey completely filled.
- 2- Verify that when partial survey is complete and user close driver then dashboard should get updated for respective questions graph
- 3- Verify that when one question is answered as soon as possible without going on next page graph should update.

Test Data:

I have use total number of records in each graph once one survey is complete then number of each graph increased respectively.

Definition:

- 1- If number is not increased after survey completion then test would be failed.

Fetch number of records first then complete a survey then again fetch total number of records from dashboard and compare it should be greater than before survey completion.
- 2- Fetch number of records first then answer only one question without clicking on next button and close the browser then again fetch total number of records from respective dashboard and compare it should be greater than before if not increase then test failed.
- 3- Fetch number of records from dashboard first then answer only two question and close the browser then again fetch total number of records from respective dashboard and compare it should be greater than before if not increase then test failed.
